

RESUSCITATION IMPROVEMENT ESSENTIALS

DATA & ANALYTICS COURSE

Overview

This half-day Data & Analytics Course will provide comprehensive training on the importance of data collection, review and debriefing, as well as exploring the practical benefits of incorporating retrospective data analysis into clinical resuscitation practice.

Course Content

- Introduction and course overview
- The Importance of Data
- ZOLL RescueNet® software, computer-based interactive training
- Aggregate Reporting
- Action Plan & Implementation

Objectives

- Learn how to use data to drive quality improvement
- Examine and review reporting with new ideas and clinical based examples
- Perform retrospective case analysis through deliberate practice

Additional support

The ZOLL Clinical Support Specialist will continue to liaise with the hospital and assist in the review of cardiac arrests where required. The specialist will provide data-collection tips and help overcome any data-related challenges.

- Ideal for clinicians responsible for reviewing cardiac arrest data
- Learn tips to implement immediately
- No additional charge

This program is provided at no cost. For more information about the Data & Analytics Course, contact your ZOLL representative.
